Mail Box and Bldg/Room Location: _____ Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.
****

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _See attached_____

Inventors (please provide full names): _See attached_____

Earliest Priority Filing Date: _11/17/1999_____

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Looking for a system that controls a patient to control who has access to individual patient data. For example, a patient can distribute passwords only to people the patient desires to have access to the patient data (see underlined portion of claim 1). The key distinction over the prior art is that the control server does not know identity verification. As long as a valid password or PIN is entered, the user is allowed access to the data. Thus the password or PIN is distributed by the patient to other users without the control server verifying who the users are.
